

IN VITA 9

The eye listens too

„At the end of the day, it's the acoustic values that count, but they're welcome to be packaged appealingly. And the Heco In Vita 9 flatter the eye without false modesty. With the combination of high-gloss and matte lacquer, a subtle, very handsome contrast is offered.“

„As soon as drums, guitars and harmony vocals kick in the first word that comes to mind is majestic. I have seldom perceived the subtleties in a well-made stereo mix so vividly. The soundstage seems huge. The wandering echoes on the drums and claps almost visibly leap across the room. Massive analog synths provide a proper foundation in the bass range, which is reproduced fully and without a hint of drone, as if fresh from the studio. The follow-up song „Rollercoaster“ impresses with punchy, multi-tracked drums and fat analog synth basslines. Here the three woofers directly show what they are capable of. The bass is punchy, clear and dry. I'm a fan of modern music with a thick low end. And now I'm also a fan of the Hecos. The impulse fidelity with which the Bleachers sound from the transducers brings a few tears of joy to my eyes.“

CONCLUSION

„Heco definitely didn't promise too much and delivered a real masterpiece. At 2998 euros for the pair, the In Vita 9 are an investment that needs to be considered. However, the quality of the speakers and the sound they produce convinced me down to the last detail. The equipment with three woofers offers a bass reproduction that is unparalleled. The reproduction is rich in detail, musical and impulsive. The midrange driver delivers a fantastic sonority and the tweeter dome doesn't let any acoustic detail escape. When it comes to the quality of the individual components, the Heco is beyond reproach. Visually, the floorstanding speakers fit into almost any living environment thanks to their retro look design with a few modern twists. Thanks to the bi-amping and the optional tweeter input, some adjustments are also possible in the sonic fine-tuning. The In Vita 9 is a truly fantastic speaker that reveals the difference between listening to music and enjoying it.“
